

Auto Controller 2 Manual

by brianuuuSonic

System: Camera Checker

Checks current Nintendo Switch system type, theme, and checks camera delay.

Requirements

- **Serial Port:** Yes
- **Camera Device:** Yes
- **Audio Input:** No

Setup Instructions

1. Go to Global Settings, making sure System type matches your current system
2. In Nintendo Switch's system settings, under Display section, set RGB Range to Full Range
3. At the same section, click Adjust Screen Size and set to 100%
4. For Nintendo Switch 1 users, you MUST have at least 3 games at Home menu
5. For Nintendo Switch 2 users, you MUST turn off **both** HDR output, **Console Screen's HDR Output** and **HDR Output** below
6. Start the program at Home screen

Expected Results

This program will first check your system type and theme color, and warn you if your Global Settings is set incorrectly or any issue with camera's color. Then it goes to Test Controller Buttons menu to check camera delay. If the camera delay is larger than 1 second, then some programs may not work properly. You may need a different capture card (preferably one that uses USB 3.0)
