

Auto Controller 2 Manual by brianuuuSonic

Pokemon Fire Red/Leaf Green: Overworld Shiny

Run back and forth for random encounters until a shiny is found

Requirements

- **Serial Port:** Yes
- **Camera Device:** Yes
- **Audio Input:** Yes

Program Settings

- **Type:**
More Up and Down, Left and Right, Spin in Place (useful for Safari Zone/Repel), or Fishing
- **Move Time:**
Move for this many milliseconds before turning around (unused for Spin in Place)
- **Use Dialog Delay:**
Enabling this will use dialog delay to detect shiny as a backup, this will only work AFTER the 2nd battle, as 1st battle is used to calibrate delay. (**WARNING:** If the route contains Pokemon with Intimidate ability, it will be treated as false positive since it delays the dialog, disable this option for those routes)

Setup Instructions

1. Switch 2 user must disable all HDR settings, **Console Screen's HDR Output** and **HDR Output** below
2. Found a place where there are walls on both sides, the closer the walls the better as you will spend less time getting stuck on one side if encounter has happened
3. For Spin in Place, start with character facing direction except for Up, otherwise it may walk up one tile before spinning
4. For Fishing, you must have a fishing rod registered to Y button, then stand at any fishing spot
5. **Sound MUST be set to Mono in in-game options**
6. Your first Pokemon must be fast enough to run away any encounters, and **MUST NOT** be shiny to reduce time for each encounter

Expected Results

The program simply runs back and forth, listen if there's a shiny sound during the random encounter, if not runs and repeats.
